# **ALCHEMIX VC 3394**

### Description

ALCHEMIX VC 3394 is a two-component low colour, easily pigmentable vacuum casting system designed specifically for use in gravity vacuum casting machines. ALCHEMIX VC 3394 has excellent mechanical and thermal properties. It is suitable for a wide range of applications, and can be used to simulate thermoplastics such as ABS.

#### **Features**

- Optically clear, low colour
- Easily pigmented
- High temperature resistance: rigid on demould

### **Mix Ratio**

|           | VC 3394A | VC 3394B |
|-----------|----------|----------|
| By Weight | 100      | 120      |

## **Component Data**

|             | Conditions | VC 3394A                         | VC 3394B                         |
|-------------|------------|----------------------------------|----------------------------------|
| Description | -          | Polyol                           | Isocyanate                       |
| Appearance  | -          | Colourless<br>liquid             | Pale yellow<br>liquid            |
| Viscosity   | 25°C       | 450 – 750<br>mPa.s               | 100 – 200<br>mPa.s               |
| Density     | 25°C       | 1.04 – 1.08<br>gcm <sup>-3</sup> | 1.20 – 1.24<br>gcm <sup>-3</sup> |

# **Cure Data**

|                           | Conditions | Typical Value                 |
|---------------------------|------------|-------------------------------|
| Appearance                | -          | Clear, pale yellow            |
| Mixed Viscosity           | 25°C       | 200 – 400 mPa.s               |
| Mixed Density             | 25°C       | 1.12 – 1.16 gcm <sup>-3</sup> |
| Pot Life                  | 200g, 25°C | 4 min 30 –                    |
|                           |            | 6 min 30                      |
| Demould Time <sup>1</sup> | 70°C       | 45 – 60 mins                  |
| Maximum                   | -          | 5 mm                          |
| Casting                   |            |                               |
| Thickness                 |            |                               |

## **Cured Properties**

|                                   | Standard        | Typical Value   |
|-----------------------------------|-----------------|-----------------|
| Hardness                          | ISO 868         | 85 – 90 D       |
| Linear<br>Shrinkage <sup>2</sup>  | 500 x 50 x 3 mm | < 0.20 %        |
| Tensile Strength                  | ISO 527         | 66 – 70 MPa     |
| Elongation at<br>Break            | ISO 527         | 5 – 7 %         |
| Tensile Modulus                   | ISO 527         | 1400 – 1700 MPa |
| Flexural Strength                 | ISO 178         | 84 – 90 MPa     |
| Flexural<br>Modulus               | ISO 178         | 2000 – 2300 MPa |
| Glass Transition Temperature (Tg) | DMA             | 83 – 87 °C      |

<sup>&</sup>lt;sup>2</sup> See "Shrinkage" section below.

## **Processing Data**

|                          | Recommended Value |
|--------------------------|-------------------|
| Part A Temperature       | 40°C              |
| Part B Temperature       | 40°C              |
| Mould Temperature        | 70°C              |
| Cure Temperature         | 70°C              |
| Vacuum time              | 10 minutes        |
| Mixing time <sup>3</sup> | 45 – 60 seconds   |
| Cure Time <sup>4</sup>   | 45 – 60 minutes   |

<sup>&</sup>lt;sup>3</sup> See "Processing Instructions" section below.

## **Mould Preparation**

For best results, use ALCHEMIX RTV 240 silicone rubber. Before use, ensure that the mould is clean. Heat the mould in an oven to 70°C; this may take several hours if the mould is very large. Splitting the tool will speed up the warming process. Using a release agent can prolong the life of the mould, but may affect the surface finish of the cured product. We do not recommend the use of condensation cured silicone rubber with this product.

<sup>&</sup>lt;sup>4</sup> See "Curing and Post Cure" section below.

# **ALCHEMIX VC 3394**

### **Resin Preparation**

Open both A and B containers and examine for any signs of crystallization. If crystallization has occurred, place the container in an oven at  $50-60^{\circ}\text{C}$  for approximately 2 hours, gently shaking the container every 30 minutes. Both components should be heated to  $40^{\circ}\text{C}$  before use. If using pigments, add the pigment to the part A. We suggest using a maximum of 3% pigment.

## **Processing Instructions**

ALCHEMIX VC 3394 should be processed in a gravity vacuum casting machine. Weigh the part A into the larger mixing cup and the part B into the smaller cup. Allow an additional amount of part B to account for the cup loss. Degas for 10 minutes, whilst slowly mixing the part A. After degassing, pour the part B into the part A whilst mixing. Mix the two components for 45-60 seconds. When mixing is complete pour the mixed material into the mould. When material can be seen exiting from the risers break the vacuum.

### **Curing and Post Cure**

Immediately after casting, place the mould in an oven at  $70^{\circ}$ C for 45-60 minutes. Curing time, especially in thin sections, will depend on mould temperature. The warmer the mould, the quicker the cure. Larger castings may require a shorter curing time, smaller castings may require a longer curing time. Demould immediately, do not leave in the mould for prolonged periods of time (more than 90 minutes). A post cure is not usually required for this product.

# **Shrinkage**

The shrinkage value above is quoted as a guide only. Shrinkage will vary with each mould design, as factors such as mould size and geometry can affect the degree of shrinkage. Generally speaking, large, thick castings will have a greater degree of shrinkage than small, thin castings. Other factors, such as mould temperature and resin temperature can also have an effect. Post curing the part can also lead to a greater degree of shrinkage. Please contact Alchemie Ltd for more information.

## **Storage**

ALCHEMIX VC 3394A and B should be stored in original, unopened containers between 20 and 25°C. ALCHEMIX VC 3394B may crystallise partially or completely if not stored at above 20°C. Like all polyurethanes, both components are moisture sensitive. Moisture absorption will cause excessive aeration in cast parts. KEEP THE PACKING TIGHTLY SEALED WHEN NOT IN USE. If stored under the above conditions, ALCHEMIX VC 3394A and B will have a shelf life of 6 months, from the date of production.

### **Packaging**

ALCHEMIX VC 3394A is supplied in 835g kits. ALCHEMIX VC 3394B is supplied in 1kg kits. Please contact Alchemie Ltd for bulk supply.

#### **Further Information**

This is a Preliminary Data Sheet, product data may be revised at a later date following further testing.
